CITY AND TRAFFIC

Living in a big city has its perks—there's always something going on, places to go, food to try, and people to meet. But let's not sugarcoat it: city traffic is brutal. Whether you're in São Paulo, New York, or any other major city, getting stuck in traffic has become part of daily life. You're just trying to get to work or meet a friend, and boom—you're stuck in a sea of brake lights.

In cities like São Paulo, it's not unusual to spend hours in traffic, even outside rush hour. Motorbikes weave through cars, bus lanes are packed, and everyone's trying to beat the system. In New York, the subways are fast but unpredictable, and if you decide to drive, good luck finding parking. City life moves fast, but traffic has a way of slowing everything down.

People try to adapt—leaving earlier, working remotely, using apps to check routes, or hopping on bikes and scooters. But even with all these options, some days you still end up stuck, bumper to bumper, wishing you had just stayed home. It can seriously affect your mood, your productivity, and even your health. At some point, everyone has hit their limit and said, "I'm so over this."

Still, there's something about city life that keeps us coming back. The energy, the diversity, the feeling that anything can happen at any moment. You might be stuck in traffic one minute and grabbing tacos at a food truck the next. It's chaotic, but exciting—and deep down, a lot of people actually like the madness.

At the same time, people are starting to rethink what urban life should look like. Should we keep building more roads, or invest in better public transportation? Is owning a car still worth it in cities where ride-share and metro systems are everywhere? More and more people are asking these questions, especially as traffic continues to eat up their time and energy.

DISCUSSION QUESTIONS:

- 1 - What's your personal experience with traffic like in your city? How do you deal with it?
- 2 - Do you think public transportation should be improved or replaced by newer ideas like bikes, scooters, and ride-share apps?
- 3 - If you could redesign your city's traffic or transit system, what would you change?
