

LISTENING

#18

1 – Listen to a conversation between a taxi driver and a passenger.

Answer the questions to understand where the passenger wants to go, how long the trip will take, how much it costs, and what recommendations the driver gives during the ride.

CAR ACCIDENT

1 - What did Katie drive over before hitting the tree?

2 - How did the man react when he saw the car accident?

3 - How did the daughter feel after hitting the mailbox?

4 - What mistake did the father assume Katie had made?

5 - What actually caused the accident according to the daughter?

6 - What object under the driver's seat contributed to the accident?

7 - Why couldn't the daughter see well while driving?

8 - What problem did the daughter have with her weekend plans?

9 - How did the mother suggest resolving the weekend problem?

10 - What was the final decision about the car for the daughter's trip?

Young Drivers Twice as Likely to Crash, Study Finds

The youngest drivers on the road are twice as likely to be involved in accidents as the average motorist, and collisions involving young drivers are five times more likely to result in an injury, according to a new study released by Admiral car insurance.

The research, based on data from two million Admiral policyholders, revealed that 13.2% of 17-year-olds and 12.8% of 18-year-olds had a crash within a one-year period. In comparison, the average rate for all other age groups was 6.5%. The study also highlighted that drivers over the age of 50 were the safest on the road, with only 2% reporting an accident in a typical year.

In addition to being more likely to crash, young drivers tend to cause more expensive damage. Admiral reported that the average cost of an accident involving a 17- or 18-year-old driver reached nearly £3,500 — roughly double the overall average of £1,741. The insurer noted that these figures suggest younger motorists are more prone to high-speed collisions that result in serious vehicle damage.

Sue Longthorn, Admiral's managing director, explained that driving experience plays a major role in these outcomes. "Driving experience makes a huge difference and is the main reason older motorists have lower premiums," she said. "It isn't until motorists reach 25 that their accident statistics improve substantially, but it really is the youngest ones who are the biggest risk."

In an effort to reduce future accidents, Admiral supports the *Young Driver* program, which allows people aged 11 to 16 to take driving lessons in dual-control cars at safe, off-road locations. The initiative aims to give young people early experience behind the wheel, promoting safer habits before they begin driving independently.
